Javatrekker Dean Cycon 2007-10-17 In each cup of coffee we drink the major issues of the twenty-first century-globalization, immigration, women's rights, pollution, indigenous rights, and self-determination-are played out in villages and remote areas around the world. In Javatrekker: Dispatches from the World of Fair Trade Coffee, a unique hybrid of Fair Trade business, adventure travel, and cultural anthropology, author Dean Cycon brings readers face-to-face with the real people who make our morning coffee ritual possible. Second only to oil in terms of its value, the coffee trade is complex with several levels of middlemen removing the 28 million growers in fifty distant countries far from you and your morning cup. And, according to Cycon, 99 percent of the people involved in the coffee economy have never been to a coffee village. They let advertising and images from the major coffee companies create their worldview. Cycon changes that in this compelling book, taking the reader on a tour of ten countries in nine chapters through his passionate eye and unique perspective. Cycon, who is himself an amalgam-equal parts entrepreneur, activist, and mischievous explorer-has traveled extensively throughout the world's tropical coffeelands, and shows readers places and people that few if any outsiders have ever seen. Along the way, readers come to realize the promise and hope offered by sustainable business principles and the products derived from cooperation, fair pricing, and profit sharing. Cycon introduces us to the Mamos of Colombia-holy men who believe they are literally holding the world together-despite the severe effects of climate change caused by us, their "younger brothers." He takes us on a trip through an ancient forest in Ethiopia where many believe that coffee was first discovered 1,500 years ago by the goatherd Kaldi and his animals. And readers learn of Mexico's infamous Death Train, which transported countless immigrants from Central America northward to the U.S. border, but took a horrifying toll in lost lives and limbs. Rich with stories of people, landscapes, and customs, Javatrekker offers a deep appreciation and understanding of the global trade and culture of coffee. In each cup of coffee we drink the major issues of the twenty-first century-globalization, immigration, women's rights, pollution, indigenous rights, and self-determination-are played out in villages and remote areas around the world. What is Fair Trade Coffee? Coffee prices paid to the farmer are based on the international commodity price for coffee (the "C" price) and the quality premium each farmer negotiates. Fair Trade provides an internationally determined minimum floor price when the C plus premium sinks below \$1.26 per pound for conventional and \$1.41 for organics (that's us!). As important as price, Fair Trade works with small farmers to create democratic cooperatives that insure fair dealing, accountability and transparency in trade transactions. In an industry where the farmer is traditionally ripped off by a host of middlemen, this is tremendously important. Cooperatives are examined by the Fairtrade Labeling Organization (FLO), or the International Fair Trade Association (IFAT), European NGOs, for democratic process and transparency. Those that pass are listed on the FLO Registry or become IFAT members. Cooperatives provide important resources and organization to small farmers in the form of technical assistance for crop and harvest improvement, efficiencies in processing and shipping, strength in negotiation and an array of needed social services, such as health care and credit. Fair Trade also requires pre-financing of up to sixty percent of the value of the contract, if the farmers ask for it. Several groups, such as Ecologic and Green Development Fund have created funds for pre-finance lending.

Learning to Rank for Information Retrieval and Natural Language Processing, Second Edition Hang Li 2022-05-31 Learning to rank refers to machine learning techniques for training a model in a ranking task. Learning to rank is useful for many applications in information retrieval, natural language processing, and data mining. Intensive studies have been conducted on its problems recently, and significant progress has been made. This lecture gives an introduction to the area including the fundamental problems, major approaches, theories, applications, and future work. The author begins by showing that various ranking problems in information retrieval and natural

language processing can be formalized as two basic ranking tasks, namely ranking creation (or simply ranking) and ranking aggregation. In ranking creation, given a request, one wants to generate a ranking list of offerings based on the features derived from the request and the offerings. In ranking aggregation, given a request, as well as a number of ranking lists of offerings, one wants to generate a new ranking list of the offerings. Ranking creation (or ranking) is the major problem in learning to rank. It is usually formalized as a supervised learning task. The author gives detailed explanations on learning for ranking creation and ranking aggregation, including training and testing, evaluation, feature creation, and major approaches. Many methods have been proposed for ranking creation. The methods can be categorized as the pointwise, pairwise, and listwise approaches according to the loss functions they employ. They can also be categorized according to the techniques they employ, such as the SVM based, Boosting based, and Neural Network based approaches. The author also introduces some popular learning to rank methods in details. These include: PRank, OC SVM, McRank, Ranking SVM, IR SVM, GBRank, RankNet, ListNet & ListMLE, AdaRank, SVM MAP, SoftRank, LambdaRank, LambdaMART, Borda Count, Markov Chain, and CRanking. The author explains several example applications of learning to rank including web search, collaborative filtering, definition search, keyphrase extraction, query dependent summarization, and re-ranking in machine translation. A formulation of learning for ranking creation is given in the statistical learning framework. Ongoing and future research directions for learning to rank are also discussed. Table of Contents: Learning to Rank / Learning for Ranking Creation / Learning for Ranking Aggregation / Methods of Learning to Rank / Applications of Learning to Rank / Theory of Learning to Rank / Ongoing and Future Work **Leica Camera Repair Handbook** Thomas Tomosy 1999 With great detail this book outlines all of the techniques needed to repair and restore Leica cameras, lenses, and accessories?including light meters, winders/motors, viewfinders, and flash units. Each model of equipment is discussed individually with step-by-step illustrated instructions. Left for Dead Pete Nelson 2002-05-14 For fans of sea battles, adventures, and war stories like *Unbroken*, this is the incredible true story of a boy who helps to bring closure to the survivors of the tragic sinking of the USS *Indianapolis*, and helps exonerate the ship's captain fifty years later. Hunter Scott first learned about the sinking of the USS *Indianapolis* by watching the movie *Jaws* when he was just eleven-years-old. This was fifty years after the ship had sunk, throwing more than 1,000 men into shark-infested waters—a long fifty years in which justice still had not been

served. It was just after midnight on July 30, 1945 when the USS Indianapolis was torpedoed by a Japanese submarine. Those who survived the fiery sinking—some injured, many without life jackets—struggled to stay afloat as they waited for rescue. But the United States Navy did not even know they were missing. As time went on, the Navy needed a scapegoat for this disaster. So it court-martialed the captain for “hazarding” his ship. The survivors of the Indianapolis knew that their captain was not to blame. For fifty years they worked to clear his name, even after his untimely death. But the navy would not budge—not until Hunter entered the picture. His history fair project on the Indianapolis soon became a crusade to restore the captain’s good name and the honor of the men who served under him. Law: A Very Short Introduction Raymond Wacks 2008-03-27 Law underlies our society - it protects our rights, imposes duties on each of us, and establishes a framework for the conduct of almost every social, political, and economic activity. The punishment of crime, compensation of the injured, and the enforcement of contracts are merely some of the tasks of a modern legal system. It also strives to achieve justice, promote freedom, and protect our security. The result is a system that, while it touches all of our daily lives, is properly understood by only a few, with its impenetrable jargon, obsolete procedures, and interminable stream of Byzantine statutes and judgments of the courts. This clear, jargon-free Very Short Introduction aims to redress that

balance, as it introduces the essentials of law and legal systems in a lively, accessible, and stimulating manner. Explaining the main concepts, terms, and processes of the legal system, it focuses on the Western tradition (the common law and the civil law), but also includes discussions of other legal systems, such as customary law and Islamic law. And it looks to the future too, as globalization and rapid advances in technology place increasing strain on our current legal system. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Singley 2003-01-30 Edith Wharton, arguably the most important American female novelist, stands at a particular historical crossroads between sentimental lady writer and modern professional author. A Historical Guide to Edith Wharton provides scholarly and general readers with historical contexts that illuminate Wharton’s life and writing in new, exciting ways.
