Annual Editions: Early
Childhood Education 09/10

Karen Menke Paciorek
2009-02-19 Annual Editions is a series of over 65 volumes, each designed to provide convenient, inexpensive access to a wide range of current articles from some of the most respected magazines, newspapers, and journals published today. Annual Editions are updated on a regular basis through a continuous monitoring of over 300 periodical sources. The articles selected are authored by prominent scholars, researchers, and commentators writing for a general audience. The Annual Editions volumes have a number of common organizational features designed to make them particularly useful in the classroom: a general introduction; an annotated table of contents; a topic guide; an annotated listing of selected World Wide Web sites; and a brief overview for each section. Each volume also offers an online Instructor's Resource Guide with testing materials. Using Annual Editions in the Classroom is the general

instructor's guide for our popular Annual Editions series and is available in print (0073301906) or online. Visit www.mhcls.com for more details.

Learning and Teaching Early Math Douglas H. Clements
2014-05-23 In this important book for pre- and in-service teachers, early math experts Douglas Clements and Julie Sarama show how "learning trajectories" help diagnose a child's level of mathematical understanding and provide guidance for teaching. By focusing on the inherent delight and curiosity behind young children's mathematical reasoning, learning trajectories ultimately make teaching more joyous. They help teachers understand the varying levels of knowledge exhibited by individual students, which in turn allows them to better meet the learning needs of all children. Using straightforward, no-nonsense language, this book summarizes the current research about how children learn mathematics, and how to

build on what children already know to realize more effective teaching. This second edition of *Learning and Teaching Early Math* remains the definitive, research-based resource to help teachers understand the learning trajectories of early mathematics and become quintessential professionals. Updates to the new edition include:

- Explicit connections between Learning Trajectories and the new Common Core State Standards.
- New coverage of patterns and patterning.
- Incorporation of hundreds of recent research studies.

successful educational journey. Each practice page features a “One Step Further” activity to encourage children to apply skills to everyday experiences. The books include fun puzzles and mazes in a bonus “Games and Activities” section.

Motor Skills and Their Foundational Role for Perceptual, Social, and Cognitive Development

Klaus Libertus 2017-05-18 Motor skills are a vital part of healthy development and are featured prominently both in physical examinations and in parents’ baby diaries. It has been known for a long time that motor development is critical for children’s understanding of the physical and social world. Learning occurs through dynamic interactions and exchanges with the physical and the social world, and consequently movements of eyes and head, arms and legs, and the entire body are a critical during learning. At birth, we start with relatively poorly developed motor skills but soon gain eye and head control, learn to reach, grasp,

sit, and eventually to crawl and walk on our own. The opportunities arising from each of these motor milestones are profound and open new and exciting possibilities for exploration and interactions, and learning. Consequently, several theoretical accounts of child development suggest that growth in cognitive, social, and perceptual domains are influenced by infants' own motor experiences. Recently, empirical studies have started to unravel the direct impact that motor skills may have on other domains of development. This volume is part of this renewed interest and includes reviews of previous findings and recent empirical evidence for associations between the motor domain and other domains from leading researchers in the field of child development. We hope that these articles will stimulate further research on this interesting question.

Building Blocks Gene I. Maeroff 2015-01-27 A student's entire journey along the educational spectrum is affected by what occurs—and, crucially, by what does not occur—before the age of eight or nine. Yet early learning has never received the attention it deserves and needs. In his latest book, education expert Gene Maeroff takes a hard look

at early learning and the primary grades of schooling. Building Blocks offers a concrete and groundbreaking strategy for improving early education. Filled with colorful descriptions and anecdotes from Maeroff's visits to schools around the country, Building Blocks creates a rich portrait of education in America, ranging from math lessons imported from Singapore in Massachusetts to serious but joyful kindergartens in California. He speaks of the need for schools to prepare for the burgeoning enrollment of youngsters from immigrant families and for all children to acquire the habits and dispositions that will make them committed and productive students. Maeroff issues a call to action for policy makers and parents alike.

Early Years 1983

Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn 2015-09-28 Learning to read, and to spell are two of the most important cultural skills that must be acquired by children, and for that matter,

anyone learning a second language. We are not born with an innate ability to read. A reading system of mental representations that enables us to read must be formed in the brain. Learning to read in alphabetic orthographies is the acquisition of such a system, which links mental representations of visual symbols (letters) in print words, with pre-existing phonological (sound) and semantic (comprehension) cognitive systems for language. Although spelling draws on the same representational knowledge base and is usually correlated with reading, the acquisition processes involved are not quite the same. Spelling requires the sequential production of letters in words, and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography. Reading, on the other hand, requires only the recognition of a word for pronunciation. Hence, spelling is more difficult than reading,

and learning to spell may necessitate more complete representations, or more conscious access to them. The learning processes that children use to acquire such cognitive systems in the brain, and whether these same processes are universal across different languages and orthographies are central theoretical questions. Most children learn to read and spell their language at the same time, thus the co-ordination of these two facets of literacy acquisition needs explication, as well as the effect of different teaching approaches on acquisition. Lack of progress in either reading and/or spelling is also a major issue of concern for parents and teachers necessitating a cross-disciplinary approach to the problem, encompassing major efforts from researchers in neuroscience, cognitive science, experimental psychology, and education. The purpose of this Research Topic is to summarize and review what has been accomplished so far, and to further explore

these general issues. Contributions from different perspectives are welcomed and could include theoretical, computational, and empirical works that focus on the acquisition of literacy, including cross-orthographic research.

Overview: MELQO UNESCO
2017-08-14 The Measuring Early Learning Quality and Outcomes (MELQO) initiative began in 2014 as part of the global emphasis on early childhood development (ECD). Led by UNESCO, the World Bank, the Center for Universal Education at the Brookings Institution and UNICEF, the initiative aims to promote feasible, accurate and useful measurement of children's development and learning at the start of primary school, and of the quality of their pre-primary learning environments. Items are designed for children between the ages of 4 and 6 years. Following the premise that many existing tools include similar items, the leading organizations' core team worked with a consortium of experts, non-governmental organizations (NGOs) and multilaterals to build upon current measurement tools to

create a common set of items organized into modules for measuring: 1) early childhood development and learning, and 2) the quality of pre-primary learning environments. The MELQO core team and experts also collaborated to outline a process for context-specific adaptation of the measurement modules resulting from lessons learned from field-testing in several countries in 2015 and 2016. The modules are designed to be implemented at scale, with an emphasis on feasibility for low- and middle-income countries (LMICs). A key question addressed by MELQO was the balance between a global tool suitable for use everywhere, and local priorities and goals for children's development.

Early Childhood Mathematics Skill Development in the Home Environment Belinda Blevins-Knabe 2016-10-17 This volume presents current research on the connections between the home and family environment on children's mathematics development. Focusing on infancy through first grade, it details the role of parents and other caregivers in promoting numeracy and the ways their active participation can prepare young children for learning about formal mathematics. Research data answer key questions regarding the development of numeracy alongside cognitive and linguistic skills, early acquisition of specific math skills, and numeracy of children with atypical language skills. The book also provides practical recommendations for parents and other caregivers as well as implications for future research studies and curriculum design. Included in the coverage: Ways to optimize home numeracy environments.

Individual differences in numerical abilities. Cross-cultural comparisons and ways to scaffold young children's mathematical skills.

Mathematics and language in the home environment. Center-based and family-based child care. Games and home numeracy practice. *Early Childhood Mathematics Skill Development in the Home Environment* is an essential resource for researchers, graduate students, and professionals in infancy and early childhood development, child and school psychology, early childhood education, social work, mathematics education, and educational psychology.

Transforming the Workforce for Children Birth Through Age 8

National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce

for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with

adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress.

Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Math plus Reading, Grades PK - K 2012-09-01 Math and reading activities in one super-sized volume! Summer Link Math plus Reading, Summer Before Kindergarten helps children prepare for kindergarten. Aligned to state and national standards, this 320 page workbook offers preschool children skill-and-

Relationship Between Entry and Exit Kindergarten Measures, Parent/child Attitude and Fourth and Fifth Grade Measures of Reading and Math Achievement

Lavonne Ionne Carlson 1995
Advancing Knowledge and Building Capacity for Early Childhood Research Sharon Ryan 2021-01-20 This volume employs a multidisciplinary approach to research on a high-profile topic very much on the agenda of state and national policy leaders: early childhood development and education. It aims to reflect how scholarly perspectives shape the contours of knowledge generation, and to illuminate the gaps that

prevent productive interchange among scholars who value equity in the opportunities available to young children, their families, and teachers/caregivers. The editors and authors identify and prioritize critical research areas; assess the state of the field in terms of promising research designs and methodologies; and identify capacity-building needs and potential cross-group collaborations.

Kindergarten Transition and Readiness Andrew J. Mashburn
2018-06-09 This book presents a comprehensive overview of children's transitions to kindergarten as well as proven strategies that promote their readiness. It presents theories and research to help understand children's development during the early childhood years. It describes evidence-based interventions that support children in developmental areas essential to school success, including cognitive, social-emotional, and self-regulatory skills. Chapters review prekindergarten

readiness programs designed to promote continuity of learning in anticipation of the higher grades and discuss transitional concerns of special populations, such as non-native speakers, children with visual and other disabilities, and children with common temperamental issues. The volume concludes with examples of larger-scale systemic approaches to supporting children's development during the transition to kindergarten, describing a coherent system of early childhood education that promotes long-term development. Featured topics include: Consistency in children's classroom experiences and implications for early childhood development. Changes in school readiness in U.S. kindergarteners. Effective transitions to kindergarten for low-income children. The transition into kindergarten for English language learners. The role of close teacher-child relationships during the transition into kindergarten.

Children’s temperament and its effect on their kindergarten transitions. Kindergarten Transition and Readiness is a must-have resource for researchers, clinicians and related professionals, and graduate students in child and school psychology, educational psychology, social work, special education, and early childhood education.
