Advanced Practice Provider Skills Made Easy: A Practice Guideline Obi Oji
2022-07 "This book offers hands-on clinical skills based on latest evidence-based research and is geared specifically towards advanced practitioner providers (family nurse practitioner students, novice and

experienced practitioners, physician assistants, and other advanced practice providers) in primary care settings and focuses on their scope of practice as specified by the state board"--

Step-by-step Medical Coding Carol J. Buck 2004 Step-by-Step Medical Coding takes a practical approach to training students for a career in medical coding. It begins with an introduction to Current Procedural Terminology (CPT), followed by in-depth explanations of the sections found in the CPT manual. Several chapters, organized to follow the CPT codes by body system, introduce various procedures and demonstrate how to code each one. Practice exercises following each step of information and at the end of each unit reinforce important concepts and allow users to check their comprehension. Unit 2 covers the International Classification of Diseases, 9th Revision, Clinical Modification (ICD 9-CM), and Unit 3 offers information about third party reimbursement. Appendices provide the official ICD-9-CM guidelines for coding and reporting, answers to the in-text exercises, and the documentation guidelines for E/M services. Instructor resources are available; please contact your Elsevier sales representative for details. Repetition of skills in each chapter reinforces material, and creates a logical progression to for easy learning, as well as illustrating skill integration In-text exercises throughout each chapter immediately reinforce the coding rules and concepts, emphasizing

the step-by-step organization of the book Medical procedures or conditions are illustrated and discussed in the text help readers understand the services being coded. From the Trenches feature highlights a different real-life medical coding practitioner in each chapter, with photographs throughout the chapter alongside quotes that offer practical advice or motivational comments. Coding Shots contain tips for the new coder. Stop! notes offer a brief summary of material that was just covered and provide a transition to the next topic. Caution! notes warn students of common coding mistakes and reinforce the concept of coding as an exact science. Check This Out boxes offer notes relevant to the coding profession. Official Coding and Reporting Guidelines boxes in the chapter on Using the ICD-9-CM contain excerpts of the actual guidelines so the reader can see the official wording presented alongside discussions of that topic in the text. Format for answers includes four response variations: one answer blank for coding questions that require a one-code answer; multiple answer blanks for coding questions that require a multiple-code answer; identifiers next to the blank(s) guide readers through the most difficult coding scenarios; and answer blanks with a preceding symbol prompt the reader to decide the number of codes necessary to correctly answer the question. New illustrations enhance the quality of the text and illustrate the most important coding concepts. Documentation Guidelines for Evaluation

and Management Services has been added as an appendix. Official Guidelines for Coding and Reporting boxes in the chapter on Using the ICD-9-CM (chapter 15) have been modified to visually indicate inpatient vs. outpatient use based on the 2003 changes to the guidelines. Expanded glossary familiarizes new coders with important terms. Concrete, real-life examples demonstrate the application of important coding principles and practices, such as financial losses that can result from inappropriate coding. Updated, improved chapter learning objectives and end-chapter review questions help readers focus on essential chapter content.

A PRACTICAL GUIDE TO LEADERSHIP AND MANAGEMENT IN ACADEMIC RADIOLOGY

Ronald L. Arenson 2012-01-01 This is a practical nuts-and-bolts guide that is based on the authors' experience and success in the Radiology Department at the University of California at San Francisco. Academic chairs, especially those recently appointed, struggle with leadership and management. Many have little prior experience in these areas. The material presented here is practical and specific. Each chapter is independent of the others, and the text can be used mostly as a reference tool. The text deals with the major issues facing academic Radiology leaders. The topics selected were chosen carefully and are based on the authors' collective years of experience attempting to manage their own department but also consult for many others. The first topic is the balance among the three primary missions of an academic department, namely, clinical care, teaching, and research. These three major missions will be described in some depth, with an effort to provide reference materials that, hopefully, will stand the test of time and remain useful over the years to come. In addition, this text will provide guidance about faculty development, departmental organization, marketing and fundraising, and strategic perspectives. It will be of interest to chairs,

departmental administrators, vice-chairs and other departmental leaders, section chiefs, hospital administrators and, of course, consultants.
