The Battleship Bismarck Stefan Draminski 2018-09-20 The Bismarck is perhaps the most famous – and notorious – warship ever built. Completed in 1941, the 45,000-ton German battleship sank HMS Hood, the pride of the British Navy, during one of the most sensational encounters in naval history. Following the sinking, Bismarck was chased around the North Atlantic by many units of the Royal Navy. She was finally dispatched with gunfire and torpedoes on 27 May, less than five months after her completion. Her wreck still lies where she sank, 4,800m down and 960km off the west coast of France. Drawing on new research and technology, this

edition is the most comprehensive examination of Bismarck ever published. It includes a complete set of detailed line drawings with fully descriptive keys and full-colour 3D artwork, supported by technical details, photographs and text on the building of the ship and a record of the ship's service history.

Let there be Science Tom McLeish 2017-01-20 Why is it that science has consistently thrived wherever the Christian faith can be found? Why is it that so many great scientists - past and present - attribute their motivation and their discoveries, at least partially, to their Christian beliefs? Why are the age-old writings of the Bible so full of questions about natural phenomena? And, perhaps most importantly of all, why is all this virtually unknown to the general public? Too often, it would seem, science has been presented to the outside world as a robotic, detached, unemotional enterprise. Too often, Christianity is dismissed as being an ancient superstition. In reality, neither is the case. Science

is a deeply human activity, and Christianity is deeply reasonable. Perhaps this is why, from ancient times right up to today, many individuals have been profoundly committed to both - and have helped us to understand more and more about the extraordinary world that we live in. As authors Tom McLeish and David Hutchings examine the story of science, and look at the part that Christianity has played, they uncover a powerful underlying reason for doing science in the first place. In example after example, ranging from 4000 BC to the present day, they show that thinking with a Christian worldview has been intimately involved with, and sometimes even directly responsible for, some of the biggest leaps forward ever made. Ultimately, they portray a biblical God who loves Science - and a Science that truly needs God.

Chocolate Louis E. Grivetti 2011-09-20 International Association of Culinary Professionals (IACP) 2010 Award Finalists in the Culinary History category. **Chocolate.** We all love it, but how much do we really know about it? In addition to pleasing palates since ancient times, chocolate has played an integral role in culture, society, religion, medicine, and economic development across the Americas, Africa, Asia, and Europe. In 1998, the Chocolate History Group was formed by the University of California, Davis, and Mars, Incorporated to document the fascinating story and history of chocolate. This book features fifty-seven essays representing research activities and contributions from more than 100 members of the group. These contributors draw from their backgrounds in such diverse fields as anthropology, archaeology, biochemistry, culinary arts, gender studies, engineering, history, linguistics, nutrition, and paleography. The result is an unparalleled, scholarly examination of chocolate, beginning with ancient pre-Columbian civilizations and ending with twenty-first-century reports. Here is a sampling of some of the fascinating topics explored inside the book: Ancient gods and Christian celebrations: chocolate and religion
Chocolate and the Boston smallpox epidemic of 1764

Chocolate pots: reflections of cultures, values, and times
Pirates, prizes, and profits: cocoa and early American eastcoast trade
Blood, conflict, and faith: chocolate in the southeast and southwest borderlands of North America
Chocolate in France: evolution of a luxury product
Development of concept maps and the chocolate research portal
Not only does this book offer careful documentation, it also features new and previously unpublished information and interpretations of chocolate history. Moreover, it offers a wealth of unusual and interesting facts and folklore about one of the world's favorite foods.

Titanic Bruce Beveridge 2008 While everyone knows the new White Star liner was the most glamorous and was full of millionaires when she sank, few appreciate just how luxurious she was. Even in Third Class, the accommodation was better than on First Class on many older ships. For the first time, Bruce Beveridge, Steve Hall and Scott Andrews look at the ship itself, and at her interior design and fittings. From cobalt blue Spode china and Elkington plate silverware in the a la carte restaurant to the design of the boilers and fixtures and fittings onboard the world's most luxurious vessel, they tell the story of a liner built at the peak of the race between the British, French and Germans to build bigger and better ships. --from publisher description

Creating the Twentieth Century Vaclav Smil 2005-08-25
The two pre-World War I generations encompassed the greatest innovative period in history. Battleship Bismarck William H. Garzke 2019-06 This new

book on Bismarck offers a forensic analysis of the design, operation and loss of Germany's greatest battleship and draws on survivors' accounts and the authors' combined decades of experience in naval architecture and command at sea. Their investigation into every aspect of this battleship has taken fifty-six years of painstaking research, during which time they conducted extensive interviews and corresponded with the ship's designers and the survivors of the battle of the Denmark Strait and Bismarck's final battle. Albert Schnarke, for instance, the former gunnery officer of Tirpitz, Bismarck's sister ship, aided the authors greatly by translating and supplying manuscript materials from those who had participated in the design and operations. Survivors of Bismarck's engagements contributed to this comprehensive study including D B H Wildish, RN, damage control officer aboard HMS Prince of Wales, who located photographs of battle damage to his ship. After the wreck of Bismarck was discovered in June 1989, the authors served as technical consultants to Dr Robert Ballard, who led three trips to the site. Film maker and explorer James Cameron has contributed a chapter, which gives the reader a comprehensive overview of his deep-sea explorations on Bismarck and it is illustrated with his team's remarkable photographs of the wreck. The result of nearly six decades of research and collaboration, this new work is an engrossing and encyclopaedic account of the events surrounding one of the most epic naval battles of World War Two. And *Battleship Bismarck* finally resolves some of the major questions around her career, not least the most profound one of all: Who sank the Bismarck, the British or the Germans? AUTHORS: William H. Garzke is a graduate of the University of Michigan with a degree in naval

architecture and marine engineering. Robert O. Dulin is a graduate of the US Naval Academy and later earned his MS in naval architecture and marine engineering from MIT. William J. Jurens currently serves as an associate editor for Warship International. James Cameron is a Canadian film maker and deep-sea explorer.

RMS Olympic Mark Chirnside 2015-05-04 The definitive study on this famous and highly successful White Star liner. Sitting around a dining room table in 1907, the owners of the White Star Line discussed their competition to the newly-built Cunard liners, Lusitania and Mauretania. From that smoke-filled room came the first designs of three White Star superliners. Olympic and Titanic were to be built at Harland & Wolff's yard in Belfast, while the third ship was to follow after construction had been completed on the first pair of sisters. The only ship to make a return passenger voyage was Olympic and she was always overshadowed by her younger sisters. This is the definitive story of Titanic's sister RMS Olympic.

RMS Titanic Manual David Hutchings 2011-05-15 The world famous ocean liner Titanic, which sank on her maiden voyage in 1912, is the latest subject to receive the Haynes Manual treatment. With an authoritative text and hundreds of illustrations, see how this leviathan was built, launched, and fitted out. Read about her lavish passenger accommodation. Learn about the captain's responsibilities, including the operation of a transatlantic liner. Consider the chief engineer's view—how did he manage the huge engines and other onboard systems? What was it like to operate the luxury ocean liner from the perspective of Titanic's owner, the White Star line?

Titanic in Photographs Daniel Klistorner 2014-04-01 The name Titanic has become synonymous with catastrophe, the story of this luxurious liner legendary. Wrecked after colliding with an iceberg on her maiden voyage, the loss of around 1,500 lives among her passengers and crew has gone down in history as one of the most motive and tragic disasters in history. In this evocative collection of photographs the full story of Titanic is told, set against the backdrop of the great race to build the biggest and best passenger liner. From her genesis in the shipyard of Harland & Wolff to the anticipation of her launch and through her fitting out and sea trials, the excitement of Titanic's maiden voyage is keenly evident in the many rare and unusual images in this book. Looking at her departure from Southampton and her stops at Cherbourg and Queenstown, and including many photos never before published, this book follows the story to its tragic conclusion, the role of Carpathia and the aftermath of this shattering disaster.

RMS Titanic Peter Davies-Garner 2005-07-30 RMS Titanic has had more written about her than any other ship but, surprisingly, there is little information directed at the modelmaker. This superb book contains all the information needed to build a highly accurate model, down to the tiniest details of the hull's rivets. The work is based on the author's remarkable 18ft model, built to 1/48 scale, and specially commissioned for a travelling exhibition in North America. The book contains a mass of practical information on how to construct every part of the great liner and is equally applicable to a small static bread-and-butter display model as to a large working version. Profusely

illustrated with close-up photographs, detailed drawings and a large collection of photographs of the prototype herself, the book also contains a complete set of plans considered to be the most accurate yet drawn. With this mix of practical information, rare photographs and highly detailed drawings the book can appeal to all Titanic enthusiasts as well as to ship modellers of every sort.

Of Popes and Unicorns David Hutchings 2021 *Of Popes and Unicorns* shares the story of John Draper and Andrew White who, in the late 19th century, published books falsely claiming a toxic history between religion and science. This book examines the implications of Draper and White's conspiracy and debunks the conflict thesis once and for all.

Curriculum Wesley Null 2016-12-13 This updated second edition of *Curriculum: From Theory to Practice* provides an introduction to curriculum theory and how it relates to classroom practice. Wesley Null builds upon recent developments while at the same time continuing to provide a unique organization of the curriculum field into five traditions: systematic, existential, radical, pragmatic, and deliberative. Null discusses the philosophical foundations of curriculum as well as historical and contemporary figures who have shaped each curriculum tradition. To ensure breadth and scope, Null has expanded this second edition to include figures not present in the first. Additionally, after a chapter on each of the five perspectives, Null presents case studies that describe realistic and specific curriculum problems that commonly arise within educational institutions at all levels. Scholars and practitioners alike are given opportunities to practice resolving curriculum problems through deliberation. Each case

study focuses on a critical issue such as the implementation of curriculum standards, the attempt to reform core curriculum within universities, and the complex practice of curriculum making. In the final chapter, Null offers a vision for the curriculum field that connects curriculum deliberation with recent developments in moral philosophy.

A Historical Review and Analysis of Army Physical Readiness Training and Assessment Whitfield East 2013-12 "The Drillmaster of Valley Forge-Baron Von Steuben- correctly noted in his "Blue Book" how physical conditioning and health (which he found woefully missing when he joined Washington's camp) would always be directly linked to individual and unit discipline, courage in the fight, and victory on the battlefield. That remains true today. Even an amateur historian, choosing any study on the performance of units in combat, quickly discovers how the levels of conditioning and physical performance of Soldiers is directly proportional to success or failure in the field. In this monograph, Dr. Whitfield "Chip" East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers

for the physical demands of combat. Our culture is becoming increasingly "unfit," due to poor nutrition, a lack of adequate and formal exercise, and too much technology. Still, the Soldiers who come to our Army from our society will be asked to fight in increasingly complex and demanding conflicts, and they must be prepared through new, unique, and scientifically based techniques. So while Dr. East's monograph is a fascinating history, it is also a required call for all leaders to better understand the science and the art of physical preparation for the battlefield. It was and is important for us to get this area of training right, because getting it right means a better chance for success in combat.

Subjectivism and Interpretative Methodology in Theory and Practice Fu-Lai Tony Yu 2020-02-15 "Subjectivism and Interpretative Methodology in Theory and Practice" uses the subjectivist approach originated in Max Weber's interpretation method, Alfred Schutz's phenomenology, and Peter Berger and Thomas Luckmann's sociology of knowledge to understand economic and social phenomena. This method brings human agency back into the forefront of analysis, adding new insights not only in economics and management, but also in sociology, politics, psychology and organizational behavior.

The Sinking of the Titanic and Great Sea Disasters Logan Marshall 2012-08-07 This is one of the first and most famous books published after the sinking of the Titanic, and contains much material from contemporary newspaper

accounts. It was written by Logan Howard-Smith (under the pen name of Logan Marshall), an editor who specialized in the rapid publication of books about current events. For this book, his crowning achievement, the initial print run was for no fewer than 110,000 copies. The publisher achieved this by running 11 presses simultaneously, and the books were then sold door-to-door across America for a dollar apiece. Although Marshall's own description of the sinking is melodramatic and sensationalistic, the many verbatim interviews with survivors of the disaster have stood the test of time, and are often cited in Titanic literature. Ship Design Apostolos Papanikolaou 2014-09-16 This book deals with ship design and in particular with methodologies of the preliminary design of ships. The book is complemented by a basic bibliography and five appendices with useful updated charts for the selection of the main dimensions and other basic characteristics of different types of ships (Appendix A), the determination of hull form from the data of systematic hull form series (Appendix B), the detailed description of the relational method for the preliminary estimation of ship weights (Appendix C), a brief review of the historical evolution of shipbuilding science and technology from the prehistoric era to date (Appendix D) and finally a historical review of regulatory developments of ship's damage stability to date (Appendix E). The book can be used as textbook for ship design courses or as additional reading for university or college students of naval architecture courses and related disciplines; it may also serve as a reference book for naval architects, practicing engineers of related disciplines and ship officers, who like to enter the ship design field systematically or to use practical

methodologies for the estimation of ship's main dimensions and of other ship main properties and elements of ship design.

Media, Technology and Society Brian Winston 2002-09-11 Challenging the popular myth of a present-day 'information revolution', Media Technology and Society is essential reading for anyone interested in the social impact of technological change. Winston argues that the development of new media forms, from the telegraph and the telephone to computers, satellite and virtual reality, is the product of a constant play-off between social necessity and suppression: the unwritten law by which new technologies are introduced into society only insofar as their disruptive potential is limited.

RMS Mauretania (1907) David Hutchings 2019-12-02 FIVE YEARS in the making, RMS Mauretania and her sister the Lusitania represented a new era in British shipbuilding. Ostensibly built to compete against record-breaking German behemoths, the Mauretania was not only one of the first major ships to be turbine-driven or have four propellers - she was the largest moving structure ever to have been created by man at that time. And, soon enough, she would become the fastest as well. But the Mauretania wasn't just built for luxury. When war was declared in August 1914, she was pressed into service as a troop- and hospital ship. Where once she had carried society ladies, she now carried soldiers. Intensely researched and with over 100 photographs and illustrations, *RMS Mauretania (1907): Queen of the Seas* is the definitive book on this most remarkable liner.

Battleship Bismarck Manual 1936-41 Angus Konstam 2015-01-15 In this, the first Haynes Manual about a Second World War warship, acclaimed maritime author and historian Angus Konstam gives readers a detailed insight into the design, fighting capability and short-lived career of Nazi Germany's greatest warship. He tells the Bismarck's story, from her origins in the aftermath of the Great War and the Versailles Treaty, including Germany's capital ship building program, her design, building, launch and fitting out, to her sea trials and eventual commissioning into the Kriegsmarine.

Kipling: Poems Rudyard Kipling 2013-10-23 Beloved for his fanciful and engrossing children's literature, controversial for his enthusiasm for British imperialism, Rudyard Kipling remains one of the most widely read writers of Victorian and modern English literature. In addition to writing more than two dozen works of fiction, including *Kim* and *The Jungle Book*, Kipling was a prolific poet, composing verse in every classical form from the epigram to the ode. Kipling's most distinctive gift was for ballads and narrative poems in which he drew vivid characters in universal situations, articulating profound truths in plain language. Yet he was also a subtle, affecting anatomist

of the human heart, and his deep feeling for the natural world was exquisitely expressed in his verse. He was shattered by World War I, in which he lost his only son, and his work darkened in later years but never lost its extraordinary vitality. All of these aspects of Kipling's poetry are represented in this selection, which ranges from such well-known compositions as "Mandalay" and "If" to the less-familiar, emotionally powerful, and personal epigrams he wrote in response to the war.

Style Guide The Economist 2015-06-23 This expanded twelfth edition of the bestselling guide to style is based on the Economist's own updated house style manual, and is an invaluable companion for everyone who wants to communicate with the clarity, style and precision for which the Economist is renowned. As the introduction says, 'clarity of writing usually follows clarity of thought.' The Economist Style Guide gives general advice on writing, points out common errors and clichés, offers guidance on consistent use of punctuation, abbreviations and capital letters, and contains an exhaustive range of reference material - covering everything from accountancy ratios and stock market indices to laws of nature and science. Some of the numerous useful rules and common mistakes pointed out in the guide include: *Which informs, that defines. This is the house that Jack built. But: This house, which Jack built, is now falling down. Discreet means circumspect or prudent; discrete means separate or distinct. Remember that "Questions are never indiscreet. Answers sometimes are" (Oscar Wilde). Flaunt means display, flout means disdain. If you flout this distinction you will flaunt your ignorance Forgo means do without; forego means go before. Fortuitous means accidental, not fortunate or

well-timed. Times: Take care. Three times more than X is four times as much as X. Full stops: Use plenty. They keep sentences short. This helps the reader.

God, Stephen Hawking and the Multiverse David Hutchings 2020-01-16 'An astonishingly good read, gripping and thought-provoking' – William Lane Craig 'If you wanted to understand Stephen Hawking but couldn't face the maths, this is the book for you.' – Dr Althea Wilkinson, Jodrell Bank Stephen Hawking kept breaking rules. Given two years to live, he managed another 54. He wrote about quantum cosmology – and sold 20 million books. He could not speak, yet the world recognized his voice. Hutchings and Wilkinson shine light on his extraordinary ideas. The result is a story of black holes, origins, many universes, and Big Questions. 'Remarkable.' – Professor Christine Done, Durham University 'Highly recommended.' – Dr Luke Barnes, author, The Cosmic Revolutionary's Handbook 'A warm and well-balanced portrait of Stephen Hawking and his seminal contributions to our understanding of the universe.' – Professor Reed A. Guy, Seattle University, USA David Hutchings is a Fellow of the Institute of Physics. Professor David Wilkinson is Principal of St John's College, Durham, and a Fellow of the Royal Astronomical Society.

HMS Victory Peter Goodwin 2020-02-18 When she was launched in 1765, HMS Victory was the ultimate warship of the Georgian era. As Admiral Lord Nelson's flagship at the Battle of Trafalgar in 1805, she has since become inextricably linked to the memory of Britain's greatest naval hero. The Victory was built in the 18th century, with an expected life span of less than two decades, so the fact that she survives today - over 250 years later - is remarkable. Published with the cooperation of the Royal Navy, this book takes readers on board Nelson's

Victory to examine the innermost workings of this maritime icon - from stem to stem, above and below decks.

Mineral Rites Bob Johnson 2019-03-26 An audacious revision to the history of modernity, *Mineral Rites* shows how fossil fuels operate at the level of infrapolitics and how they permeate life as second nature.

Global Mobile Satellite Communications Stojce Dimov Ilcev 2005-12-05 Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite communications and technology have been in use for over two decades. Its initial application is aimed at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. *Global Mobile Satellite Communications* is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable

technical information, characteristics, graphics, illustrations and mathematics equations. *Global Mobile Satellite Communications* represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.

The South Pole Roald Amundsen 2001 Roald Amundsen (1872-1928), the foremost polar explorer, records his race to be the first man to reach the South Pole.

Ethics for the Information Age Michael Jay Quinn 2006 Widely praised for its balanced treatment of computer ethics, *Ethics for the Information Age* offers a modern presentation of the moral controversies surrounding information technology. Topics such as privacy and intellectual property are explored through multiple ethical theories, encouraging readers to think critically about these issues and to make their own ethical decisions.

Restaging the Past Angela Bartie 2020-08-17 *Restaging the Past* is the first edited collection devoted to the study of historical pageants in Britain, ranging from their Edwardian origins to the present day. Across Britain in the twentieth century, people succumbed to 'pageant fever'. Thousands dressed up in historical costumes and performed scenes from the history of the places where they lived, and hundreds of thousands more watched them. These pageants were one of the most significant aspects of popular engagement with the past between the 1900s and the 1970s: they took place in large cities, small towns and tiny villages, and engaged a whole range of different organised groups, including Women's Institutes, political parties, schools, churches

and youth organisations. Pageants were community events, bringing large numbers of people together in a shared celebration and performance of the past; they also involved many prominent novelists, professional historians and other writers, as well as featuring repeatedly in popular and highbrow literature. Although the pageant tradition has largely died out, it deserves to be acknowledged as a key aspect of community history during a period of great social and political change. Indeed, as this book shows, some traces of 'pageant fever' remain in evidence today.

Titanic and Her Sisters Olympic and Britannic Peter Davies-Garner 2011-07-30 The ShipCraft series explores the iconic pleasure vessels Titanic, Olympic, and Britannic in fully illustrated detail for building your own model ship. In the first of the ShipCraft series to cover non-naval vessels, this meticulously researched and illustrated volume looks at the legendary cruise ship RMS Titanic and her sisters, Olympic and Britannic. Written for the serious model ship builder, this book not only covers the many model kits available, but a concise history of the ship's class, including every detail that contributed to the ship's creation. Accompanied by hundreds of photographs of models in various scales, the text covers paint colors, line

drawings, and scale plans, as well as the differences in the ships' appearance over time. An invaluable resource on available models, their pros and cons, and ways to modify and customize each one, this ShipCraft title concludes with a reference section essential to any modeler.

The Titanic Story David Hutchings 2008 When the White Star Line's "unsinkable" transatlantic liner RMS Titanic struck an iceberg on her maiden voyage from Southampton to New York on April 15, 1912, she sank with the loss of 1,503 lives; 705 survived the disaster. From that fateful day when the pride of the British merchant marine plumed the icy depths of the North Atlantic, Titanic has become the most celebrated of maritime disasters and has spawned hundreds of books and two major films.

The Tragic Story of the Empress of Ireland Logan Marshall 2014 Chronicles the events surrounding the sinking of the Empress of Ireland after it was struck by the Storstad, resulting in the loss of over one thousand lives, and presents a retelling of other maritime tragedies.
